

HydraTite® Internal Joint Seal

Market

Water / Utilities

Challenge

The challenge was to eliminate storm drain infiltration and prevention of ground settling

Engineered Solution

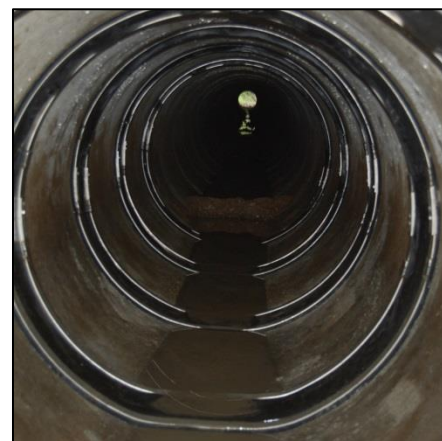

To protect the investment of a large pavement project on a parkway, the HydraTite 48-in extra wide internal pipe seals were specified to prevent infiltration and ground settling.

Scope

The project included the installation of seven 48-in extra wide HydraTite internal pipe seals to repair the pipe joints in a reinforced concrete storm drain; subjected to ground infiltration and the development of sink holes.

Solution

The total cost of installation and furnishing the HydraTite seals were competitive with hand grouting the joints, offering a 50 year design life, and eliminated water and ground infiltration of the storm drain settling.
