

# HYDRAWRAP

STRUCTURAL COMPOSITE REPAIR SYSTEM

## Market

*Power & Utilities*

## Challenge

Two pinhole leaks had developed from internal corrosion in a 36" surge vessel at a natural gas facility. Replacement would be costly and require excessive downtime.

## Engineered Solution

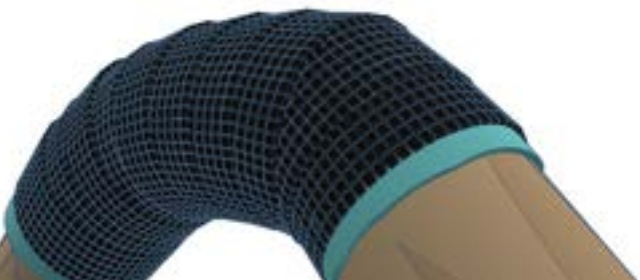

The engineer wanted a long-term solution other than replacement. HydraWrap was the selected repair method.

## Scope

Pre-cured repair patches were used to cover the pinholes. The surface was then prepared, coated in primer, and wrapped to HydraTech's specifications with the carbon fiber fabric.

## Solution

HydraWrap eliminated the pinhole leaks more cost-effectively than replacement. HydraWrap rehabilitated this aging system and will prevent further corrosion and the formation of additional pinholes.
